

THE ONLY PURE AND NATURAL SUGARING HAIR REMOVAL TREATMENT

This product is safe to use on all parts of the body.

Read Instructions Carefully Before Use

Getting Started – Heating Natural SUGAR STRIPPEASE in the Microwave

- Remove Lid from Jar
- Place jar in microwave oven on low or medium setting for 60 seconds (This is for a Microwave Oven of 650 watts)
- To be safe we suggest you place the jar on a plate.
- Please be careful when taking SUGAR STRIPPEASE jar out of the Microwave Oven.
- Stir thoroughly. The consistency should be that of runny honey. Please note the temperature should be warm not hot.

Heating in a Saucepan

- Do not remove the lid
- Place the jar in a pan of boiling water (removed from heat)
- Let the product melt to a runny honey consistency
- Please ensure no water comes in contact with the product

Do a Patch Test

- Always do a patch test on area to be sugared and wait for a couple of hours. If no irritation occurs, continue with use of product.

Directions for SWEETEST RESULTS

- Cleanse the skin to remove any moisturiser or oil from the area to be treated with a mild soapy solution.
- Wipe the area dry and dust it with SUGAR STRIPPEASE talc to absorb any moisture left.
- Test SUGAR STRIPPEASE on your inside wrist or back of the hand to make sure the temperature is comfortable enough to proceed.
- Using the side ways edge of the spatula apply a thin layer in the direction of the hair growth with a scraping action.
- Place strip immediately over applied area and smooth down firmly with gentle pressure.
- Hold the bottom corner of the strip away from applied area in preparation to be removed.
- Hold the skin firmly with one hand and pull

- the strip off with the other hand as quickly as possible (similar to removing a plaster)
- Removal of the strip should be opposite to the direction of hair regrowth for minimal discomfort. (Please see diagram)

✓ Peel cloth back along itself in one quick tug movement, as illustrated.

✗ Do not lift cloth up and away from the skin, as shown. The result will be painful and ineffective.

- The strip can be reused until the layer of SUGAR STRIPPEASE saturates the strip.
- If necessary you may reapply the treated area again without doing any damage to the skin.

Please note as with any hair removal method, slight discomfort may be experienced. Skin may turn pink for a short time after treatment. This is only a temporary irritation and is unlikely to be an allergic reaction so don't panic.

Legs

This is the correct position for sugaring legs. Apply SUGAR STRIPPEASE thinly in the direction of hair growth. Apply firm pressure to the spatula to achieve a thin film of SUGAR STRIPPEASE

The maximum area you can apply at any one time is the same as the strip and quickly and firmly pull back against the direction of hair growth.

Upper Lip Area

- Cut strips to size and use a small spatula provided
- Apply SUGAR STRIPPEASE talc generously.
- Open mouth wide to keep lips taut over teeth for entire process. Work on only partial areas at a time.
- Apply a thin layer of SUGAR STRIPPEASE in small sections from the corner of the lip toward the centre of the lip.

Pulling the whole strip from centre to corner is not effective as finer hair needs to adhere to the strip.

- Remove in one quick motion for minimal discomfort.

Bikini Line

- Remember this area is sensitive so we recommend doing it in small patches; bend leg outwards, stretch skin with one hand and with the other hand strip off against hair growth for minimal discomfort.

When doing the bikini line, hold skin taut, as shown, and apply SUGAR STRIPPEASE thinly in the direction of hair growth (see arrow).

Hold skin taut, adhere strip and pull against hair growth in one quick sure movement.

Underarm

- Place arm behind head as far back as possible to keep skin taut. Check direction of hair growth as it varies and may require a two part process. Work on upper and lower half of underarm separately. This is one area you have to ensure is completely dry, be generous when dusting SUGAR STRIPPEASE talc as you are likely to perspire more.

TOP TIPS

- Do not use any form of astringents or alcohol based products in conjunction with this treatment.
- Use SUGAR STRIPPEASE talc to absorb any moisture or perspiration on areas to be treated for best results.
- Always press strip on in direction of hair growth. Strip off in opposite direction.
- Pull strip back in one quick motion. The slower you pull the more discomfort you will experience. Think of it as you would removing a plaster. Pull it off as quickly as possible to experience MINIMAL discomfort. Speed is key for best results.
- When doing legs or arms to avoid getting in a mess start from the bottom and work your way upward .
- If you change your mind, remember you can simply wash away SUGAR STRIPPEASE with warm water.
- To finish the treatment take a wet flannel to wipe away all residue.
- To calm the skin apply SUGAR STRIPPEASE Soothing Mist.

COMMON SENSE WISDOM

- Do not use on areas that you have any sort of skin irritations or sunburn.
- Do not panic if mild irritation occurs. Allow 24 hours before applying any sort of beauty products on treated areas as precaution.
- It's best to avoid exposure to the sun immediately following sugaring process.

CLEAN UP AND CARE

- All spillages can be washed with preferably warm water.
- The strips can be washed and reused.
- Place the shive and lid when cool.
